

Lower my fuel costs. ✓

Simplify equipment maintenance. ✓

Reduce greenhouse gas. ✓

Convert your lawn mower to cleaner and greener technology: switch from gas power to propane.

Did You Know?

- Propane costs less than gasoline
- Propane is designated a **clean fuel** by the EPA and is much safer for the environment
- Propane fueled engines require less maintenance
- Propane reduces particulate emissions by 60%
- Propane cylinders are safe and offer the following advantages over gasoline containers:
 - No spillage
 - No storage issues (gasoline starts degrading after a couple of weeks)
 - Eliminates the potential for ethanol to foul engines
 - Reduced potential for theft of fuel
 - Easily transportable

The EPA estimates that 17 million gallons of gasoline are spilled each year fueling gasoline commercial mowers. With all these advantages, shouldn't you switch to propane?

Revere Gas is now an Envirogard authorized conversion center. We will provide and install the conversion kit and furnish cylinders. Call our Hartfield office for more information and to learn more about this breakthrough green technology.
